

1: What's the main point of having a computer network anyway?

- a) To make your computer run faster
- b) To let devices like phones and servers swap data and share stuff
- c) To ensure you never have to use a cable again
- d) To turn your PC into a printer

2: Why is "Resource Sharing" such a big deal for businesses?

- a) It makes everyone use the same password
- b) It lets everyone share one printer or scanner, which saves money
- c) It prevents people from talking to each other
- d) It gives everyone a free smartphone

3: When you send a big file over a network, what actually happens to it?

- a) It gets sent as one giant, heavy chunk
- b) It gets turned into a radio wave and disappears
- c) It's broken down into small "packets" to be sent bit by bit
- d) It stays on your hard drive and never moves

4: In a "Client-Server" setup, who's basically the boss that manages everything?

- a) The Client
- b) The Router
- c) The Server
- d) The Modem

5: What's the "vibe" of a Peer-to-Peer (P2P) network?

- a) One big server tells everyone what to do
- b) There is no central boss; every device is equal
- c) It only works with printers
- d) It requires a lot of expensive cables

6: Which gadget acts like a traffic cop, figuring out the best path for your data to reach its destination?

- a) Hub
- b) Switch
- c) Router
- d) Bridge

7: Why is a "Hub" considered less efficient than a "Switch"?

- a) It's too expensive

- b) It just broadcasts data to every single device instead of just the one that needs it
- c) It only works with Wi-Fi
- d) It turns off when too many people use it

8: If you have two totally different networks that speak different "languages" (protocols), what do you need to help them communicate?

- a) A Gateway
- b) A Bridge
- c) A Modem
- d) An Access Point

9: What's that "thingy" that translates digital data into signals so your home can actually connect to the Internet Service Provider (ISP)?

- a) Firewall
- b) Modem
- c) Switch
- d) Hub

10: Who's the "bouncer" at the door of your network that blocks unauthorized access and keeps the bad guys out?

- a) Access Point
- b) Bridge
- c) Firewall
- d) Router
